OSS-441/65
26 January 1965

MEMORANDUM FOR: The Record

Declass Review by NGA.

25X1 FROM : [redacted]

SUBJECT : Communications Links

1. On 22 January 1965 in a meeting with [redacted] I discussed PID's requirements for the testing of communications links to the film vault and to the IPO area in PAG. It was pointed out that our primary concern was a link to the film vault and secondarily to the IPO/PAG. Both [redacted] agreed that our requests were justified and Mr. [redacted] suggested that I arrange a conference between the parties involved. This conference was subsequently held at 1100 hours on 22 January 1965 in in my office. In addition to myself, the following were in attendance:

25X1 [redacted]

2. In this conference it was resolved that a Teletype would be connected from PID (area 3N 126) to the first floor film vault, and that another set of machines would be installed between the MCI area in PAG and the film vault. These will be utilized in attempting to develop a film ordering procedure which will reduce the man/hours currently being expended.

3. Since additional Teletype machines are available in the building, another link will be established between the PID front office (3N 121) and the IPO/PAG. When installation is complete [redacted] Security Branch, will arrange for security personnel to establish the classification of transmissions authorized for use over these lines.

25X1 4. [redacted] is to make arrangements for the necessary wiring and installation of the Teletype units, and will arrange through GSA personnel for minor modifications to the Teletypes. (Two Teletypes which were in PID 25X1 have been delivered to [redacted] in TID for modification.) It was understood that these modifications and the necessary wiring are minor in nature and should be completed by 28 January.

5. Completion of the installations mentioned above will be the first step of the "communications testing program" requested by PID through P&DS in memorandum OSS-258/64 dated 13 August 1964. This will not, however,

GROUP 1
Excluded from automatic downgrading and declassification

satisfy PID's expressed interest in testing and evaluating "various means of electronic facsimile transmission". It is understood that further action in this regard is suspended until P&DS receives approval from the Security Branch to test specific "off-the-shelf" transmission equipment.
